Your reproducible research begins with reliable automated nucleic acid extraction and biobanking

**WE PROVIDE DNA OR RNA EXTRACTION FROM BLOOD OR SALIVA**

Integration of automation with bar-coded specimens, robotics, and informatics allows for efficient and reliable high-volume, high-throughput nucleic acid extraction of biofluids. A dedicated laboratory information system tracks metadata, including biobank sample location, concentration, and volume.

To discuss your research biobanking needs call 412-648-9440 or e-mail Janette Lamb at jal18@pitt.edu or Debby Hollingshead at hollings@pitt.edu.
